Why us?

For the last 35 years, Facet5 has taken reliable, trusted personality data and turned it into meaningful insights. We believe our trait-based model of personality provides profound insights that extend beyond surface-level behaviours to an understanding of our core, enduring personality traits.

This approach recognises that our personality traits help us build a picture of ourselves that extends over time and across different contexts, making it possible to map a long-term development path for individuals. By using a trait-based model, Facet5 enables coaches and clients to reliably predict behaviours and reactions across various professional and personal scenarios.

The comparative nature of Facet5 allows individuals to understand their unique personality style in relation to others; fostering better interpersonal relationships and effective communication. This insight supports an appreciation of diversity, workplace dynamics and to enable different personality types to work together effectively.

In comparison, ipsative-based tools; which categorise personalities into broad types (such as colours or simple letter combinations) oversimplify and generalise individual behaviours. Facet5 avoids the pitfalls of over-generalisation by offering a nuanced view of an individual's unique personality profile. It supports the development of tailored, specific, and actionable development strategies that respect and leverage an individual's unique strengths.
